

The Definitive collection

What is Kolorbond?

Kolorbond is the original and best known brand of solvent-based colour coating for hard plastics. Quite uniquely, Kolorbond forms a chemical bond with the plastic. Kolorbond will not crack, peel or flake. This process is proven and comes with a ten-year colourfastness guarantee subject to our terms and conditions.

Cleaning Kolorbonded Products

- Only use water with a mild detergent, as some washing up liquids are unsuitable
- Do not use any abrasive products such as cream cleaner and scouring pads
- Do not use solvent-based cleaners (this includes most household detergents)

It's important to inform the homeowner to clean Kolorbonded products at least 4 times a year, especially if they live near an airport (chemical fallout from aircrafts can damage products) or heavy industrial areas.

Please note that full door panels can not be Kolorbonded, as the surface becomes more prone to expansion. We recommend our Composite Door ranges, as they have a good range of colours to compliment Kolorbonded frames.
