GT Quad Guard is a new revolutionary product designed to simply and effectively enhance the security of UPVC doors.

It has been developed on the success of the unique design of the GT Stay Guard Elite, and the non route direct fixing capability of the GT Guardian. The two have been combined to create a face-fix security solution, capable of meeting and exceeding the stringent PAS024 testing conditions.

Sash and Frame components are identical, providing an aesthetically pleasing look to the door with a high security perception.

If possible always fit the GT Quad Guard central to the hinges as shown in the diagram. We recommend that 4.8 x 25mm carbon steel zinc coated screws are used.

It is also recommended that, wherever possible, all screws should fix into reinforcing.
